Government Acquisitions | GAI IS AI #GAI is AI

Elevate your Mission. Automate the rest.

GAI Automation is redefining the relationship between humanity, technology, and work

> "*Working with GAI has been the most comprehensive, yet simplistic, presentation of the end-to-end application of RPA. The focus on value-add at each step and element was helpful in framing our RPA program approach internally.*"
>
> *- Associate Director, EPA*

▶▶▶ OUR CAPABILITIES

Automation Services

Certified and Cleared: GAI developers are **certified** and screened to provide AI and RPA development in cleared environments **up to TS/SCI**

Vision & Proven Expertise: We see the **big picture** and deliver on the **whole mission**. Leveraging process improvement and expert facilitation, we guide our clients through problems so they can adapt and thrive—quickly creating tangible and **quantifiable ROI**.

What Sets Us Apart: We **define our client's goals** and prioritize everything we do to achieve those goals. We are proactive about pipeline generation, ROI tracking, establishing and maturing our client's Governance Plan, and ongoing support and maintenance.

Hardware and Licensing

Solution Design: Our engineering team works with Dell and HPE to provide **properly-sized infrastructure** to support your **unique** deployment needs. Our **Professional Services team** can set up, configure, and deploy onsite hardware

License Procurement: From agency-wide enterprise bundles to individual licenses,we work to get you get the licensing you need so you can experience **efficiencies** and **technology breakthroughs** with all the leading Automation technologies

Training

Workshops: We provide AI workshops to help the federal user get acquainted with Automation terminology, market trends, and **use cases in the Public Sector**. We facilitate Automation 101 sessions with agency staff and inform them how to take their ideas from concept to a **developed solution**. GAI also provides training for agency resources on development and Center of Excellence best practices.

BETTER TOGETHER

Our trusted advisors are UiPath certified, security-cleared, and ready to hit the ground running. We work hard so our customers can "do more with less."

Automation@Gov-Acq.com

A secure, governance-driven approach to federal automation from discovery to scale.

Discover & Prioritize	Design & Architect	Build & Test	Deploy & Operate	Govern, Optimize, & Scale
We work with mission owners and IT to identify automation candidates aligned to agency goals, prioritizing opportunities based on value, risk, and feasibility.	GAI designs secure, auditable solutions using the right mix of RPA, AI, and human oversight, aligned to federal architecture, data, and governance requirements.	Certified, cleared developers build and test production-ready automations that are reliable, resilient, and compliant with agency standards.	Automations are deployed into cleared and regulated environments with monitoring, access controls, and operational visibility in place from day one.	GAI helps agencies mature their automation programs with governance, performance/ROI monitoring, and continuous optimization.

Success Highlights:

Client Challenge: The client's IT team needed to automate their manual document management tasks to expedite time spent analyzing and coding files. Five high-cost FTEs were required to perform the manual document management tasks.

GAI Value Delivered: GAI automated the process by deploying two unattended bots. Each bot processed approximately one case every 1.2 minutes (~50 cases/hr). Using two unattended robots, the client now downloads an entire month's worth of cases (~700 cases with 1,800 documents) in one day. GAI reduced the processing time by 93%!

Client Challenge: Attorneys were saddled with manually reviewing hundreds of thousands of trademark applications.

GAI Value Delivered: GAI automated this process by building and deploying a bot that runs at a 98.9% success rate. The bot offers an estimated time savings of more than two GS-14 FTEs per year (approx. 4,400 hrs/yr).

> "The Bot has been running at regular intervals since the beginning of July and has already conducted thousands of checks. Not only is the Bot helping to reduce [our] backlog in this area, but,by implementing the Bot, [our] specialists have been able to focus on attacking the backlog surge in other critical areas."
> -Sr. Attorney, USPTO

Client Challenge: Each day, the client manually uploaded a data file to their financial system—requiring users to wait 15-45 minutes for each file to process.

GAI Value Delivered: GAI automated this process with an unattended UiPath bot—after only one week of development—providing a time savings of ~200 hours/year.

Client Challenge: The client uses forms that are filled out by hand out in the field and wanted to come up with a process to digitize these forms

GAI Value Delivered: GAI created a standardized means to submit pictures of the forms, and utilizing the clients existing AI tool, developed and automation that extracted the hand written data from the form with AI, and input that data in their system and saved a copy of the image in system with their RPA software.

OUR CERTIFICATIONS

Cleared, certified, and experienced. GAI developers possess a variety of industry certifications from leaders in Federal Intelligent Automation. We operate in cleared environments up to TS/SCI and we are experienced in service delivery.
